# Biochemic Minerals

The Essential Nutrients We Need

# What Are They?

- ② 12 naturally occurring minerals in tablet form.
- ② Usually taken up from food substances.
- ② Part of the natural human structure in full, therefore intrinsic to man.
- ② Often the food we consume does not provide sufficient – and it is necessary to ensure supplementation.

# What Do They Do and Why They Work.

Provide strength to the immune system

- ④ Address human function, growth and development at a cellular level.
- ④ Provide the correct balance of cell nutrition.
- ④ Stimulate the cells that are not functioning at optimum without disturbing those that are.

# The Roles of Mineral Salts (1)

- ***Structural***: As constituent of bone, tooth, connective tissue and cell membrane.  
As stabilisers of cells
- ***Electrochemical*** : As regulators in osmotic and acid base balance. As stabilisers of cell membrane electrical gradients (Acid pH)

# The role of Mineral Salts (II)

- ***Metabolic and catalytic roles*** : As enzyme activators, and stabilisers, affecting nearly all metabolic pathways and cellular function.
- ***Miscellaneous roles***: as a means of determining simple cation/anion bonding and further determining more complex molecules such as complexes, chelates and hormones.

# Some examples of effectiveness

*TO NAME BUT A FEW...THE LIST IS ENDLESS..... USING THE MOST NATURAL OF THE ELEMENTS, THOSE FROM WHICH WE ARE COMPRISED AND REQUIRE IN ORDER TO SURVIVE.*
